# Patient Pre-ID Portal

Pre-ID portal helps sponsors see site potential

Merge was asked by a CRO client to develop a portal that would allow site personnel to report details regarding pre-identified patients. They could then return to the portal to record the results of patient pre-screening activities. The sponsor and study team could view reports for site-reported data, including site response rates and the number of patients each site was ready to screen.

Reusing Code Reduces Timelines

Leveraging a pre-built platform, Merge was able to get the Pre-ID portal completed in just 6 weeks, including QAT. Sites were entering data into the system a mere 8 weeks after work first began. System was then rolled out to all sites in all approved countries.

PORTAL DEVELOPMENT START	August 12, 2016
PORTAL LAUNCH DATE	September 26, 2016
FIRST SITE DATA	October 4, 2016

To Date

Over 510 site and study team users have been granted access to the portal. The sponsor has been able to identify and apply resources towards high-potential sites, and the system has had 100% uptime with no technical issues.

KEY STAT
280 sites in 38 countries
